

What can we do for you ?

We provide validation services as an integral part of your Total Compliance Strategy.

Kevin has been the 1st company in India to provide Regulatory Compliance Services since April 2000.

A commitment to quality and our expert Methodology is the foundation of our services and expanding client base. Our dedicated **Pharmaceutical and Computer Systems** division are uniquely qualified to optimize any validation effort by applying quality validation services and the most current technology.

Project Planning, Protocol Development, Project Implementation and actual deployment of people for all aspects of the validation effort, including Cleaning Validation, are among the services provided by KTPL for the pharmaceutical industry.

KTPL provides validation for both sterile and non-sterile facilities, including critical utilities qualification, aseptic process equipment/systems qualification for liquid and solid oral dosage forms, including processing tanks and vessels, blending, granulation, sizing, compression, tablet coating and encapsulation, and filling and packaging lines.

How do we do it ?

Our staff is qualified to help clients assess and define their compliance and validation requirements. Whether a project involves consulting or validation services for a single system, a unit operation or an entire facility, Kevin has the knowledge and experience to provide the required assistance. Our portfolio of services encompasses the entire product life cycle and includes GMP Compliance Services, Validation Services and projects requiring the integrated services of both these services.

When it comes to Validation, experience is not the only criteria. In-depth knowledge about the pharmaceutical industry, how plants function & what are the regulatory requirements, count more.

We provide client assistance with the development and/or review of functional requirements, system design review, requests for proposals, system specifications, development of standard operating procedures and vendor evaluations; including process utilities, process equipment/systems, related process control/monitoring systems and development of re-qualification programs.

Process automation and computer systems used in aseptic and non-aseptic processing as well as sterile and non-sterile filling and packaging operations including **SCADA, DCS, CSV, PLC-based control, and inventory management and Building Management Systems BMS are representative samples of KTPL services.**

These functionalities are & will be available in most of our systems enabling existing applications to be continued going forward and permitting enhancements to be made to applications with reduced effort for achieving 21 CFR Part 11 compliance.
